Glycotest Update

London, UK – June 26th 2017 – NetScientific plc ("NetScientific", AIM:NSCI), the transatlantic IP commercialisation group focused on healthcare, provides an update on the series A fundraising being undertaken by its portfolio company Glycotest, a US-based diagnostics company, as outlined in the Circular issued to shareholders following the Company's placing and subscription of new shares on 26 May 2017 (the "Circular").

The Company continues to anticipate closing the Series A round within the second half of 2017, but does not now expect to sign the relevant documentation by the end of June 2017, as was previously stated as the Company's aim in the Circular.

As at 31 December 2016 the NetScientific had invested £2.4 million in Glycotest. The Company expects that the delay will lead to an increase in its £0.5m expected spend in Glycotest in 2017, as stated in the Circular, but with overall spend remaining under £1.0m in 2017.

About Glycotest

Glycotest is a US based diagnostics company, developing biomarkers for clinical laboratory services used in the diagnosis of liver cancers and fibrosis-cirrhosis, which the Directors believe represents a \$1 billion market opportunity. Its blood-based biomarkers take advantage

of sugar-related disease signals and the company has issued patents to over 50 serum proteins with sugar structures that are altered in liver disease. The biomarkers are being developed into tests and test panels intended for the surveillance of patients with serious liver disease.
